

Janusz Poliński, Krzysztof Ochociński: Passenger Service in Innovative Train Stations

Innovative System Railway Stations on Polish railways are a new product that takes into account the needs of passengers and is fully accessible to the disabled and persons with reduced mobility. In this respect, Polish railways belong to the European vanguard. The article also covers similar solutions, developed on French, German and English railways. Existing projects evolve in the direction of adopting the most modern ecological, technical, technological and material solutions. New materials used for the construction of the railway station at the international airport in Minsk are also described.

Keywords: rail transport, passenger station, system railway station
